

Coforge is a global provider of digital solutions and services that enables its clients to transform themselves by balancing business insight and emerging technologies to achieve real-world business impact.

With a focus on very select industries, specialising in the Banking and Financial Services industry, a detailed understanding of the underlying processes of those industries and partnerships with leading platforms gives us a distinct perspective whereby Coforge leverages, with its product engineering approach, and cloud, data, integration and automation technologies to transform customers' businesses into high-growth, intelligent enterprises. Coforge's proprietary platforms power critical business processes in its core verticals.

The firm has a presence in 21 countries with 25 delivery centres in nine countries, with a robust delivery model covering both on- and off-shoring. Coforge has one of the lowest staff turnover rates in the market in all the countries where it operates.

Recently, one of our banking clients invited us to join FSQS-ES.

The information requirements for registration are very high, which at first was a bit daunting as it covered a broad variety of areas in depth.

The reality is that it was not so "terrible". The Hellios team was essential to the process, both in terms of their friendliness, availability, professionalism and knowledge. We managed to complete the process quickly and efficiently. The advantage is that the registration is done and now we only need to check and amend the data in the questionnaire annually. Hellios will notify us to ensure that our data is up to date and visible to the procurement community within FSQS-ES.

The end result has been that the FSQS-ES registration process has provided Coforge with an independent and reliable audit of our work processes and compliance, which gives our clients peace of mind about how we operate and our knowledge of the regulatory environment. FSQS-ES has also given us the opportunity for other financial institutions to view our profile with the potential for future business.

"The auditing process involved in FSQS-ES registration allows our clients in all sectors to ensure that Coforge meets the requirements they demand to ensure that 1) we work according to professional and efficient processes and 2) we meet all their compliance requirements.

Through this platform we offer security and receive visibility which is a win-win relationship with our current and potential clients."
