BAE SYSTEMS

Decarbonising BAE Systems UK & International's Value Chain

Introduction

To provide further context in support of our email requesting that you seek to register with and complete the JOSCAR Zero toolset, the following slides represent the story behind our BAE Systems UK & International Supply Chain decarbonisation program.

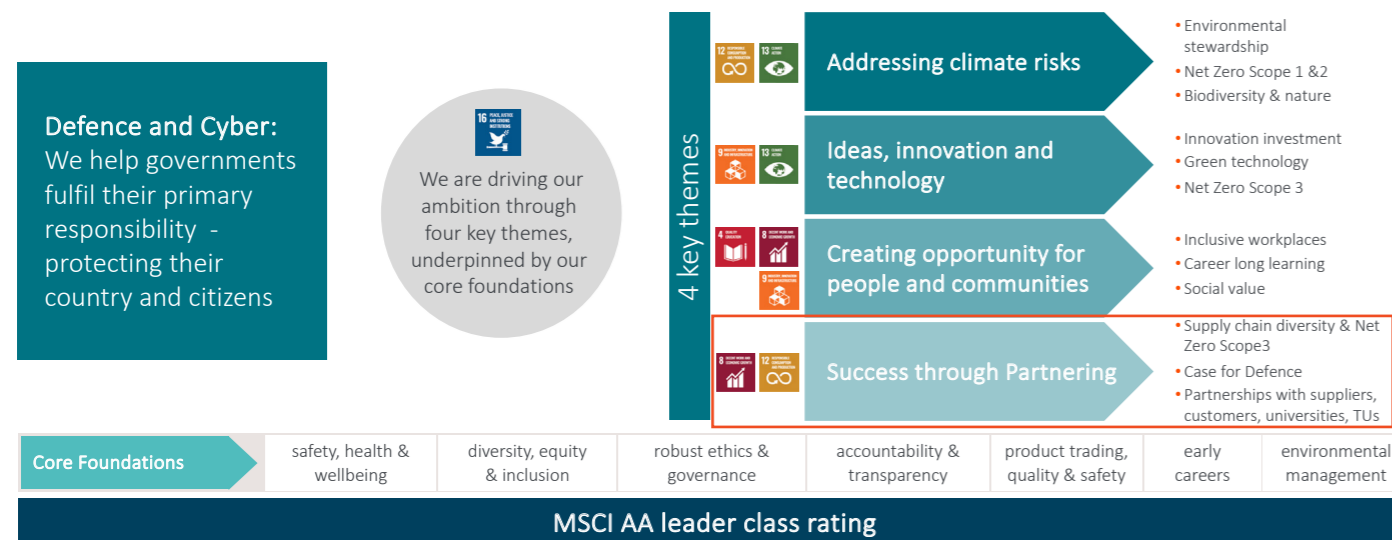

We have set a decarbonisation ambition that will drive efficiency, innovation and collaboration across our value chain. We recognise that our supply chain emissions are many times those of our Scope 1 and 2 emissions, and it is critical that we partner and collaborate with our suppliers to reduce supply chain emissions by 2050 (Scope 3 emissions).

Our success as a business relies on the resilience of our supply chain. It is vital that we collaborate and partner with our suppliers to deliver the capability our customers need and to support our suppliers in addressing challenges including in respect of the products and services they supply to us.

By working together with our supply chain we can accelerate our sustainability programmes which benefits us, our customers and wider society.

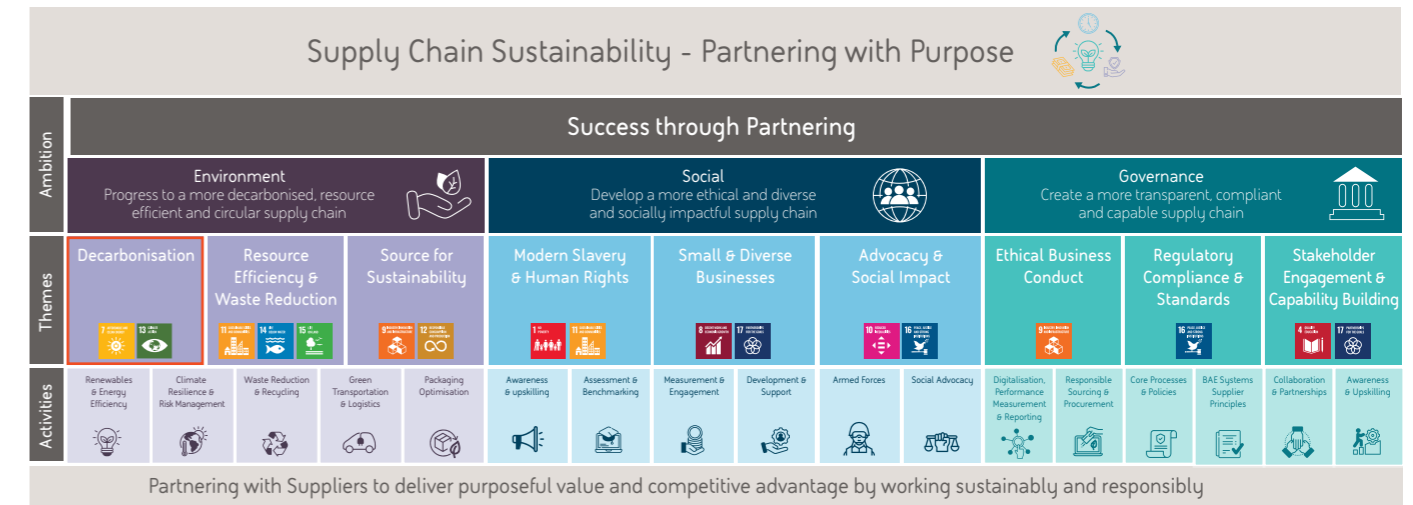

BAE Systems ESG Shop Window

This visual is our ESG Shop Window and outlines our BAE Systems ESG strategy with Success through Partnering covering our Supply Chain ESG activity and our responsibility for our Upstream Scope 3 value chain operations.

Our Supply Chain ESG Shop Window

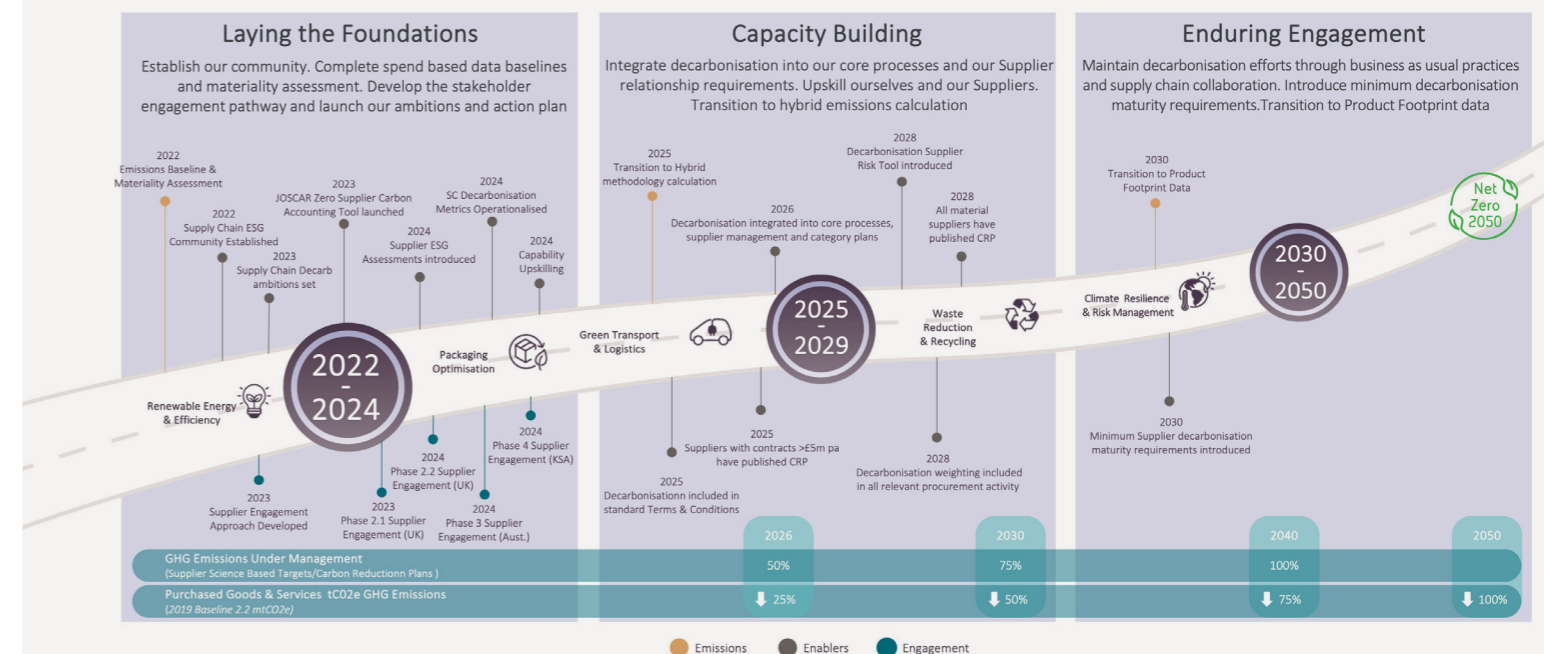

We have developed this supply chain ESG framework to provide our internal supply chain organisation with an understanding of our sustainability priorities moving forward. Decarbonisation continues to be our key theme for 2024 in the Environment space. The Governance themes are common to both Environmental and Social elements of the framework and the eleven activities along the bottom line under the Environmental and Governance themes will enable our decarbonisation journey as we move from ambition to execution.

Our Supply Chain Decarbonisation Action Plan

Collaborating with suppliers to transition from 1.35m tCO2e of GHG emissions in 2020 to Net Zero by 2050

What have we delivered and what do we collectively need to deliver in our journey towards net zero by 2050. Our ambition is informed by the UK Governments PPN06/21 guidance. Through collaboration and by partnering for success we can decarbonise our sector.
