

## What is JOSCAR Zero?

JOSCAR Zero is a collaborative decarbonisation programme to support the largest Aerospace & Defence organisations to calculate and reduce their Scope 3 carbon emissions, in support of the government’s commitment to Net Zero.

## How it works

## Builds on JOSCAR Values

Building on the established JOSCAR community recognised across the industry, JOSCAR Zero uses the same collaborative approach to reduce duplication to provide required information to stakeholders.

## Benefits for Buyers

### A scientific approach to Scope 3

JOSCAR Zero uses a fuel-based approach to calculate Scope 1, 2 & 3, aligning to the GHG Protocol hybrid methodology. Our approach minimises the assumption and allows focused effort to drive real change.

### Carbon Reduction Plans for the whole supply chain

JOSCAR Zero is a market leading decarbonisation programme that provides tailored emissions improvement actions for the whole supply chain, improving supplier operating efficiency and reducing costs.

### Leveraging the JOSCAR Community

Building on the success of JOSCAR, work with your colleagues across industry to decarbonise at scale by reducing duplicate requests for information from your suppliers.

### Coalesce around common actions

Provide your Sustainability and Procurement teams with tailored emissions reduction plans for each supplier. The simple-to-use recommendation engine allows common visibility of improvement areas for your team and your supply chain.

### Simplify your reporting

The JOSCAR Zero dashboard is intuitive and aligned to the GHG protocol, suitable for use by your procurement and sustainability teams in conversations with suppliers. It makes reporting on your Scope 3 emission data easy.
